Popular

NopSec helps security professionals simplify their work, effectively manage and prioritize vulnerabilities, and make better informed decisions. NopSec's Unified VRM is an innovative threat and vulnerability management solution that addresses the need for better prioritization and remediation of security vulnerabilities in a single platform.

Popular Add-Ons

	Pro	Enterprise	Premium
AppSec AVC Ingest appsec DAST and SAST vulnerability data and prioritize remediation.	\$500 per application per year	\$500 per application per year	\$500 per application per year
Full Stack Insights Correlate vulnerability data from appsec tools to infrastructure assets and vulnerabilities, visualize the correlation and dependency across full stacks and business lines, deliver remediation insights, risks, and SLAs to CIO, CISO, and business line leader personas.	\$5.99 per asset per year	\$5.99 per asset per year	\$5.99 per asset per year
Implementation Project management, discovery of customer business process that will translate into workflow through Unified VRM, prescriptive guidance to prepare the customer tools for integration, configuration of the Unified VRM platform and connectors, and training.	\$12,000 one-time PS	\$25,000 one-time PS	\$75,000 one-time PS
InControl Ingest telemetry data from EDR platforms to capture compensating control data and enrich the remediation prioritization.	\$12,000 per year as add-on	\$30,000 per year as add-on	Included in subscription
IT Asset Prioritization Ingest asset telemetry data from Scanner, CMDB, or other asset management tools, calculate asset criticality based on inferred business context.	\$12,000 per year as add-on	Included in subscription	Included in subscription
RBVM Container Ingest the active container images from various production, staging and testing environments. The images that are not actively in use are excluded from the subscription.	\$500 per image per year	\$500 per image per year	\$500 per image per year
TeamRed Ingest 3rd party penetration testing results per unique distinctive application or pentest.	\$500 per pentest per year	\$500 per pentest per year	\$500 per pentest per year
ThreatForce Aggregate threat intelligence from threat actors and campaign, exploits, ransomware and malware, ingest additional client-specific threat intelligence, and provide threat intelligence API services.	\$12,000 per year as add-on	\$30,000 per year as add-on	\$75,000 per year as add-on
Vendor Risk Third-party domain is defined as unique distinctive sub domains across all sources. For example, www.company.com and www.company.vendor.com are considered as two distinctive sub domains. Each sub domain will be counted once although multiple scanning tools or sources are used to report the findings. Sub domains that are not actively in use are excluded from the subscription.	\$500 per 3rd-party domain per year	\$500 per 3rd-party domain per year	\$500 per 3rd-party domain per year
