NopSec Vulnerability Management Program Services

Supplement or Build Your Vulnerability Management Program with the Experts

Cyber risks grow every day – and the number of vulnerabilities in your organization's environment continue to multiply with it. Organizations must take effective countermeasures to avoid becoming another headline. This takes a deliberate, carefully considered strategy.

To that end, organizations need a well-structured Vulnerability Management (VM) Program. With VM teams already stretched too thin, however, getting the foundation in place for a successful VM Program is no easy feat.

NopSec partners with you to manage a robust VM Program that understands and meets the needs of your unique environment. We help you operationalize your VM program by holistically assessing, prioritizing, and remediating risks and aligning key stakeholders and program sponsors to enable business strategy and goals. Your team gains insights they need for a proper VM governance framework, policies, procedures, and operational KPIs.

Drive Growth in Your Vulnerability Management Maturity with NopSec by Your Side

Our team of experts outline what is needed on a routine basis to manage your attack surfaces and authorize your Program Steering Committee to reduce cyber risks and grow the maturity of your VM Program as a whole. Our services also help you build based on measurable objectives in relation to business need and identified strategic benefits.

Key to driving this maturity growth is achieving consensus between the key players of your vulnerability management key players and components of your VM Program. As part of our services, we foster collaboration across teams and help you get the early buy-in you need.

NopSec helps security professionals simplify their work, effectively manage and prioritize vulnerabilities, and make better informed decisions. NopSec's Unified VRM is an innovative threat and vulnerability management solution that addresses the need for better prioritization and remediation of security vulnerabilities in a single platform.

NopSec Vulnerability Management Program Services

How Building and Operating a VM Program with NopSec Works

Key Goals for Your VM Program

NopSec works with your team to:

1. Build security partnerships with broader IT and business organizations to create alignment in attack surface reduction.
2. Document current state processes "as is" and collect information to design and implement future state processes.
3. Understand key pain points of existing VM and Patch Management processes, as well as share industry best practices to inform the definition/design of new processes.
4. Define key program goals, metrics, KPIs, and SLAs and obtain stakeholder buy-in.
5. Provide insight into current and potential asset management, vulnerability scanning, prioritization, and analytics tools.
6. Build a process for awareness and knowledge sharing to demonstrate your VM Program's added value and positive impact to the rest of the security ecosystem (i.e. incident response, GRC, etc.).
7. Define action items and roles and responsibilities to jump start the new VM Program.

Get Started with the VM Experts

Limited personnel or expertise shouldn't hold back your VM efforts. Let our internal experts and technology supplement your VM Program by scanning and reporting on your risk posture, building the framework for your success, and much more.

Let's shape the future of cybersecurity together. Request your custom scope to get started.

NopSec helps security professionals simplify their work, effectively manage and prioritize vulnerabilities, and make better informed decisions.
